

ARTEMIS DSS

Artemis Domain Security Service

Your most concerning vulnerability lies hidden in a pile of assessment reports, but it's a time-intensive chore that zaps your talented team of the energy it needs to focus on what's most important: **remediating actual, critical vulnerabilities**.

Full-Stack Vulnerability Assessments

Gain a live, more accurate and holistic view of your asset health through aggregated and correlated assessment results for email, malware, network and web application security.

Manually Validated Prioritized Results

Sit back while NCC Group security experts manually verify reports to filter out false positives. The remaining vulnerabilities are prioritized according to criteria you select, powering decisive, meaningful actions.

Invert the Funnel

Stop sifting through massive amounts of raw data and let us help you to identify what is urgent and actionable. Use our service to define your security policy and we'll build a mix of automated and manual testing to meet your needs.

Focus on the Delta

Focus on root causes and what you can change. Continually test your assets to build a security baseline, auto detect new vulnerabilities and receive alerts of successful remediation.

Support Your Team

Access and collaborate with live experts in our Security Operations Center (SOC) who are dedicated to helping you understand, reproduce and remediate identified vulnerabilities.

Cloud-Based Scanning

Enjoy low-hassle deployment, configuration and management. Our infrastructure has been designed from the ground up to be secure in the cloud.

Artemis DSS is a cloud-based security testing service providing continual monitoring of publicly accessible assets for exposure to network, web application, email and malware threats. Artemis provides full-service security monitoring, including manual verification of reported vulnerabilities and direct interaction with security experts to help you understand and remediate verified issues.

FEATURES	BENEFITS
Full-stack	<ul style="list-style-type: none"> • Holistic assessment of network, email, web application and malware risks to provide you a more insightful view of your security posture.
Continual	<ul style="list-style-type: none"> • Live visibility, far beyond a point-in-time snapshot. • Continual vigilance helps you hone in on root causes before remote attackers take notice.
Safe	<ul style="list-style-type: none"> • Real live humans tailor the testing regime to your particular environment to mitigate collateral damage to your production systems.
Cloud-based	<ul style="list-style-type: none"> • Ready now. No software to install or hardware to deploy. • Tests from the same vantage point as your remote attacker.
Secure	<ul style="list-style-type: none"> • Service built by security experts to optimize for end-to-end security. • Easy 2-factor authentication login.
Meaningful	<ul style="list-style-type: none"> • Vulnerabilities can be assigned to IT or engineering with confidence because assessment results are validated and prioritized by human security experts. • Confidence that remediation enhances security because identified vulnerabilities are deviations from your selected criteria.
Intuitive	<ul style="list-style-type: none"> • Intuitive customer portal enables you to focus on solving security problems in order of priority.
Interactive	<ul style="list-style-type: none"> • Interact with security engineers to help you understand, reproduce and remediate vulnerabilities. • Convenient access to the world's largest security testing team if additional assistance is needed.
